January 24<sup>th</sup>, 2012

## **LAMB OF GOD Partners with Jammit for Release of ‘Resolution’ Tracks**

**LAMB OF GOD** has partnered with Jammit, Inc.—a music software company founded by renowned producer/engineer Scott Humphrey. Each song from the band’s latest CD, *Resolution*, will be available on **Jammit** – an emerging music platform that will give musicians and fans a whole new way to experience **LAMB OF GOD**. The band’s decision to release their highly anticipated CD simultaneously for Jammit software is a testament to its innovative presentation and rich feature set. Below is a description of Jammit and the link to the **LAMB OF GOD** artist page.

### **About Jammit:**

Whether you’re an aspiring musician, an absolute beginner or a seasoned professional, **Jammit** is the easiest way to learn your favorite songs. **Jammit** delivers a stunning user experience allowing you to virtually practice and perform in the recording studio with your favorite artists. This revolutionary product utilizes the actual multi-track masters from the original recording sessions. **Jammit** tracks are available for guitar, bass, drums, keyboard and vocals, allowing you to isolate a specified instrument or vocal track from the rest of the band. The software provides note-for-note transcriptions (in standard notation or tablature), instant navigation to any part of the song, adjustable snap-to-grid looping and a slow playback mode (that doesn’t affect the pitch). Once you have learned the song, you can replace the original instrument recording with your own performance. **Jammit** is currently available for the iPad, iPhone and iPod Touch with Mac and Windows versions coming in early 2012.
